Course Code: 6228 | Duration: 8 Hours

## Course Description

This one-day program is intended to build on the learning obtained during our Comprehensive Program, and to start to apply and expand that knowledge through practical application exercises and greater in-depth technical instruction.

The course will take advantage of students' tactile learning abilities to make sense of the theoretical content, and provide students with a strong understanding of the subject. Successful completion of this program will allow the student to be able to properly implement and oversee fall safety systems at their work site.

These courses will maintain a lower student-to-instructor ratio to maximize learning and instructor interaction.

**Course prerequisite:** 6218 Fall Protection Comprehensive
