- Instructor certification card & wall certificate
- Training bag including basic classroom supplies
- Instructor resource booklet
- Detailed instructor lesson plans & course outline
- Course delivery checklists
- Electronic presentation
- Initial supply of serialized student activation kits
- Ongoing program updates & support

Course Description

This program allows prospective instructors to gain an in-depth understanding of fall protection, and to prepare them to teach our one-day Fall Protection Working At Heights course. Our Working At Heights program is approved by the Ontario Ministry of Labour as meeting the new Working At Heights training standard. Qualified candidates, who possess the skills to teach and manage a classroom environment, will be immersed in this fast-paced development course where the program is dissected by the lead Instructor. Candidates are provided opportunities to ask questions and learn the structured course materials. The last day will include a written theory test and a topic teaching evaluation.

Upon successfully completing the program, instructors will be awarded with a Fall Protection Group Certified Instructor designation. They will have the knowledge and tools to deliver our Working At Heights program to other individuals. Tools provided include an electronic presentation, serialized student activations, and a detailed instructor binder to assist with all aspects of the program. Fall Protection Group maintains these programs and will provide valid instructors with ongoing access to updated materials and information.
